

ULTRATRAC

T A B L E L O C A T I O N

WIRELESS CUSTOMER LOCATOR

The Ultra Trac Tracker from BTG Australia is a wireless customer locator, which allows customer to be located easily by food runners, ensuring orders are delivered on time to exactly the right table.

INCREASE PRODUCTIVITY

INCREASE EFFICIENCY

If you're delivering food to your customers in a busy venue, don't rely on numbers on sticks, give them an Ultra Trac Tracker with the unique Tap & Find feature. Check the table plan and your staff will find them in on time. Hot Food, delivers promptly.

Give the Ultra Trac Tracker pager to customers when ordering.

Customers tap the pager on the table tag & the pager sends back the location to the list.

Waiter delivers the food to the guest's location.

HOW TO TRACK CUSTOMERS

YOU CAN LOCATE YOUR CUSTOMER IN THREE DIFFERENT MODES

MAP MODE

Map mode allows you to upload a map of your establishment to our software and when looking for a guest simply tap on the display and it will show you your map and the location on the guest.

ALL LIST MODE

This mode shows you all your trackers in 1 screen. Showing you which trackers are being used and which are in standby mode.

AUTOMATIC LIST MODE

This view is very similar to All list mode but instead of showing all your trackers status. It only shows the Trackers that are being used at the moment and the location they are registering at the moment.

HOW TO PAGE A CUSTOMER

YOU CAN ALSO PAGE YOUR CUSTOMERS JUST LIKE A BISTRO PAGER

PAGER MODE

If a customer decides to play a poker machine or go for a cigarette for example then your team will know that they have not tapped on a table as this is displayed on the screen. They can then simply touch the order number on the screen and this will buzz the pager prompting the customer to return to collect their order.

COLOUR TRACING ALERTS

GREEN ORDERS

This means it's still in the goal time frame.

YELLOW ORDERS

This shows the staff that this order is in the "Warning Zone" or it's close to being over the goal delivery time.

RED ORDERS

This shows the order is over the "Goal Delivery Time" and can alert managers to help better the experience for the customer.

TRACKING GUESTS HAS NEVER BEEN EASIER

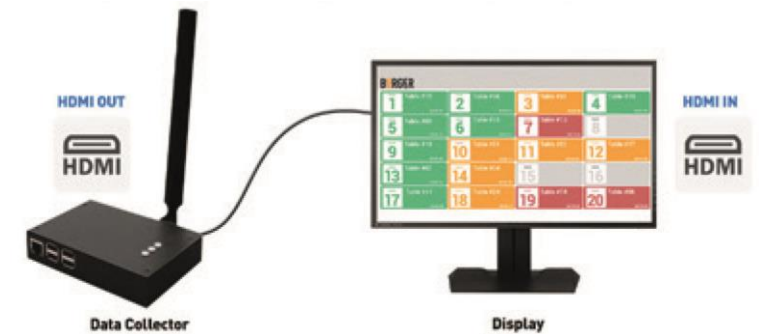

Supports

We give you the tools to make delivering food to your guests very easy.

Option 1

You can connect our data collector directly to your display via HDMI and you are ready to start working.

Option 2

You have the option to connect the data collector to your network and then you have the power to see what's happening on the floor from any device.

Pre-Programming, Installation, Staff Training & Support	4	\$135.00	\$540.00
Total Outright Purchase (Once off payment)			\$1,240.00

The table above represents indicative pricing for a 100 x Table restaurant. The top section represents the monthly rental price and the bottom section is the one off purchases. We will conduct a site survey to determine if a range repeater is required as it may not be depending on the size of the restaurant.

We are also happy to conduct an on-site demonstration and provide accurate pricing based on your restaurant sizes and table numbers. A free trial period is also available to the Panthers Group.
